

The Digital Thread for Composite Repair

John Lin and Michael Fleming

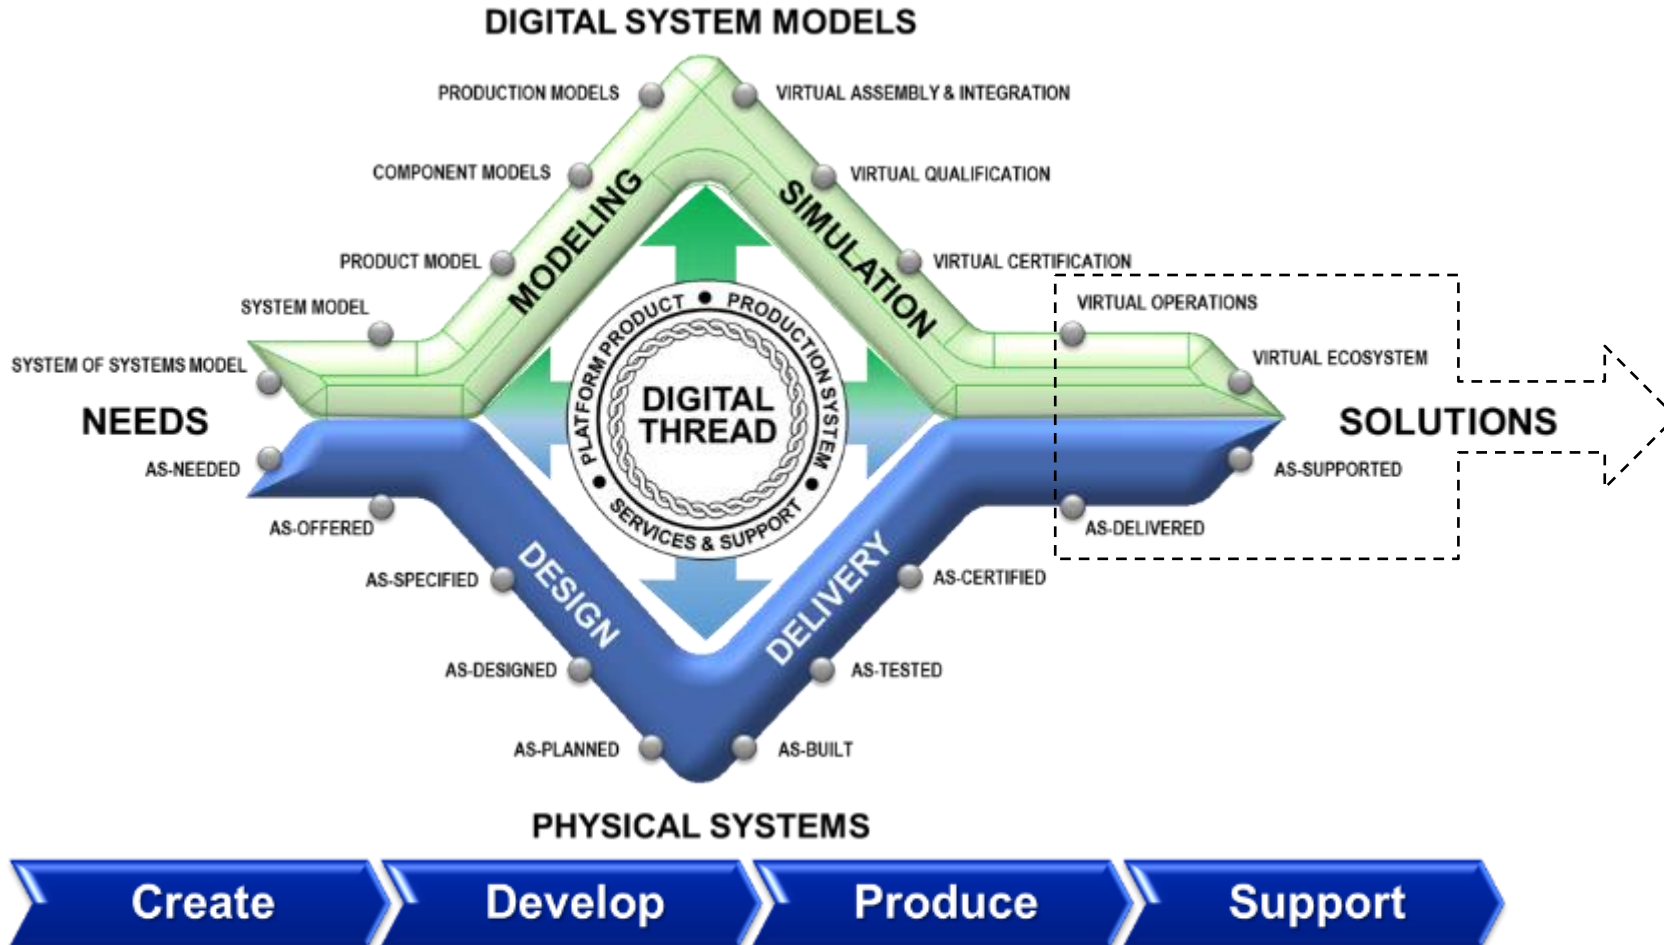

Boeing Research & Technology

March 27, 2024

To be Presented at 2024 Joint Composite & Advanced Materials Sustainment (JCAMS)

Digital Twin / Digital Thread Diamond

- **Digital Thread:** The communication framework that connects **siloes** elements and provides an **integrated, authoritative** database throughout the **product lifecycle**
- **Digital Twin:** An integrated digital simulation, enabled by Digital Thread, that uses the best available **models, sensor information, and input data** to mirror and **predict** activities/performance over the life of its corresponding physical twin.

- Stable Design
- Stable Materials
- Stable Cert Database
- Well-Defined Business Cases
- Well-Defined Processes/Roles
- Scattered Data
- Data Capture (Front End)

Composite Airframe Examples - Commercial

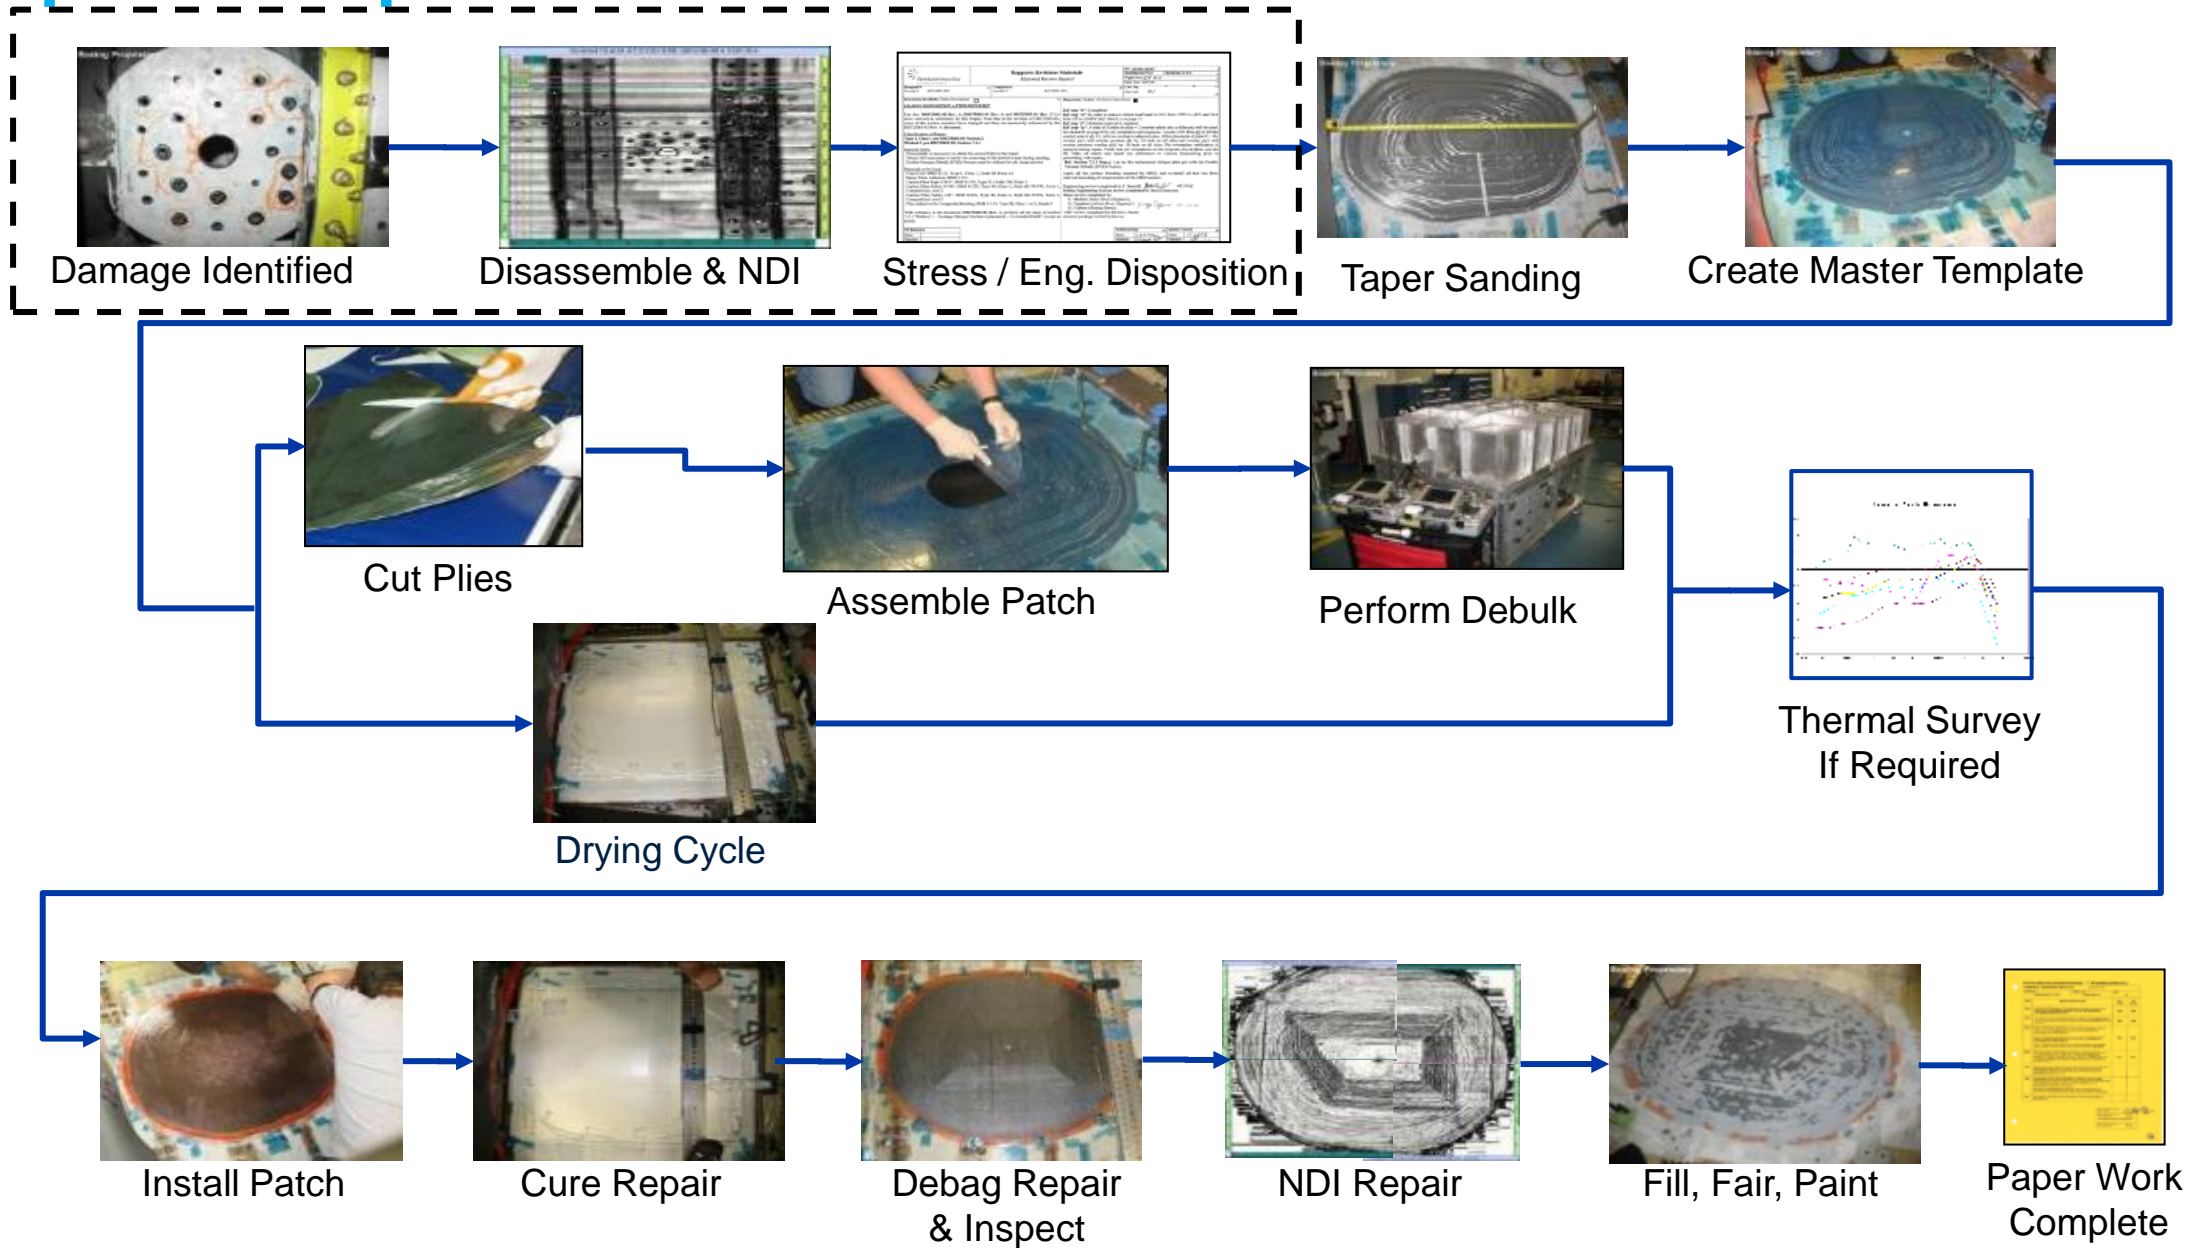

787 Dreamliner Composite Structures

- Lighter
- More durable
- Negligible corrosion and fatigue
- Reduced scheduled maintenance
- Opens new design possibilities

Composite Repair Flow

The Digital Thread for Structural Repair Analysis

Digital Thread
The communication framework that connects siloed elements and provides an integrated, authoritative database throughout the product lifecycle

The Front End

- **Basics Requirements:**

- Easy navigation to any part/location of an aircraft surrogate model
- Record damage information on a **3D model** through a **structured data input** schema
- Automatic generation of damage location **X, Y, Z coordinates**
- Access and research critical information for troubleshooting non-routine defects at the airplane, such as **SRM Allowable Damage Limits (ADL)**, **Repairable Damage Limits (RDL)**, **Common Repair Procedures**, etc.
- Communicate in real time with maintenance and engineering personnel during troubleshooting
- Access aircraft maintenance history
- Add photos or NDI data to a case from a mobile device

Updated by: Test on 16 Nov 2017 11:02:16

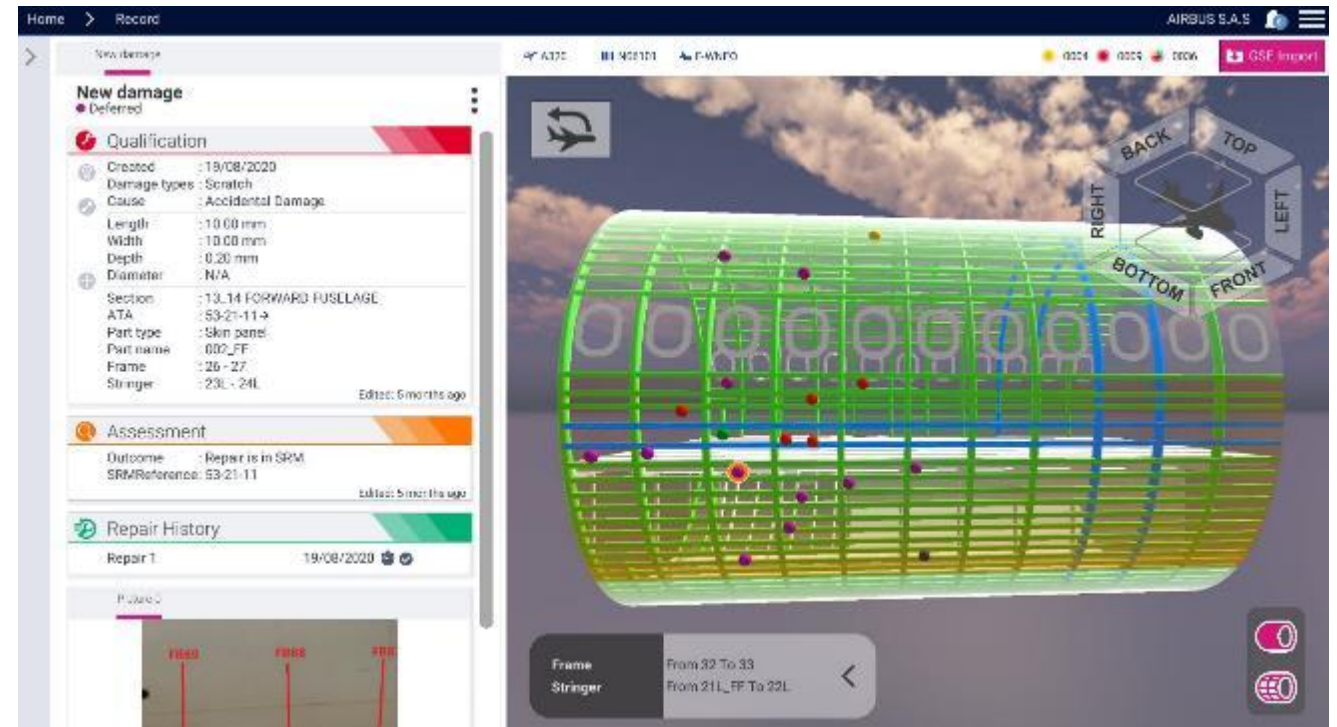

Case Description	Structural Damage	Location
Case Title N04N - LH Wing OB Aft Flap Lower Skin - Dent	Damage Type Dent	Section Wing - Left
Defect Type Structural Damage	Dimensions Width: 1.5 in. Length: 4 in. Depth: 0.056 in. W/Y = 26.8	Component Trailing Edge Outboard AFT Flap
ATA Logbook 57-53 EY export		SRM ATA 57-53-00
Description ACARS message indicated a birdstrike...		
Media	Action and References	Parts
	Action SRM 57-53-1A-5 R55 fig 103 detail F.

Public Domain Offerings

- **NLign Analytics (DoD Focused)**

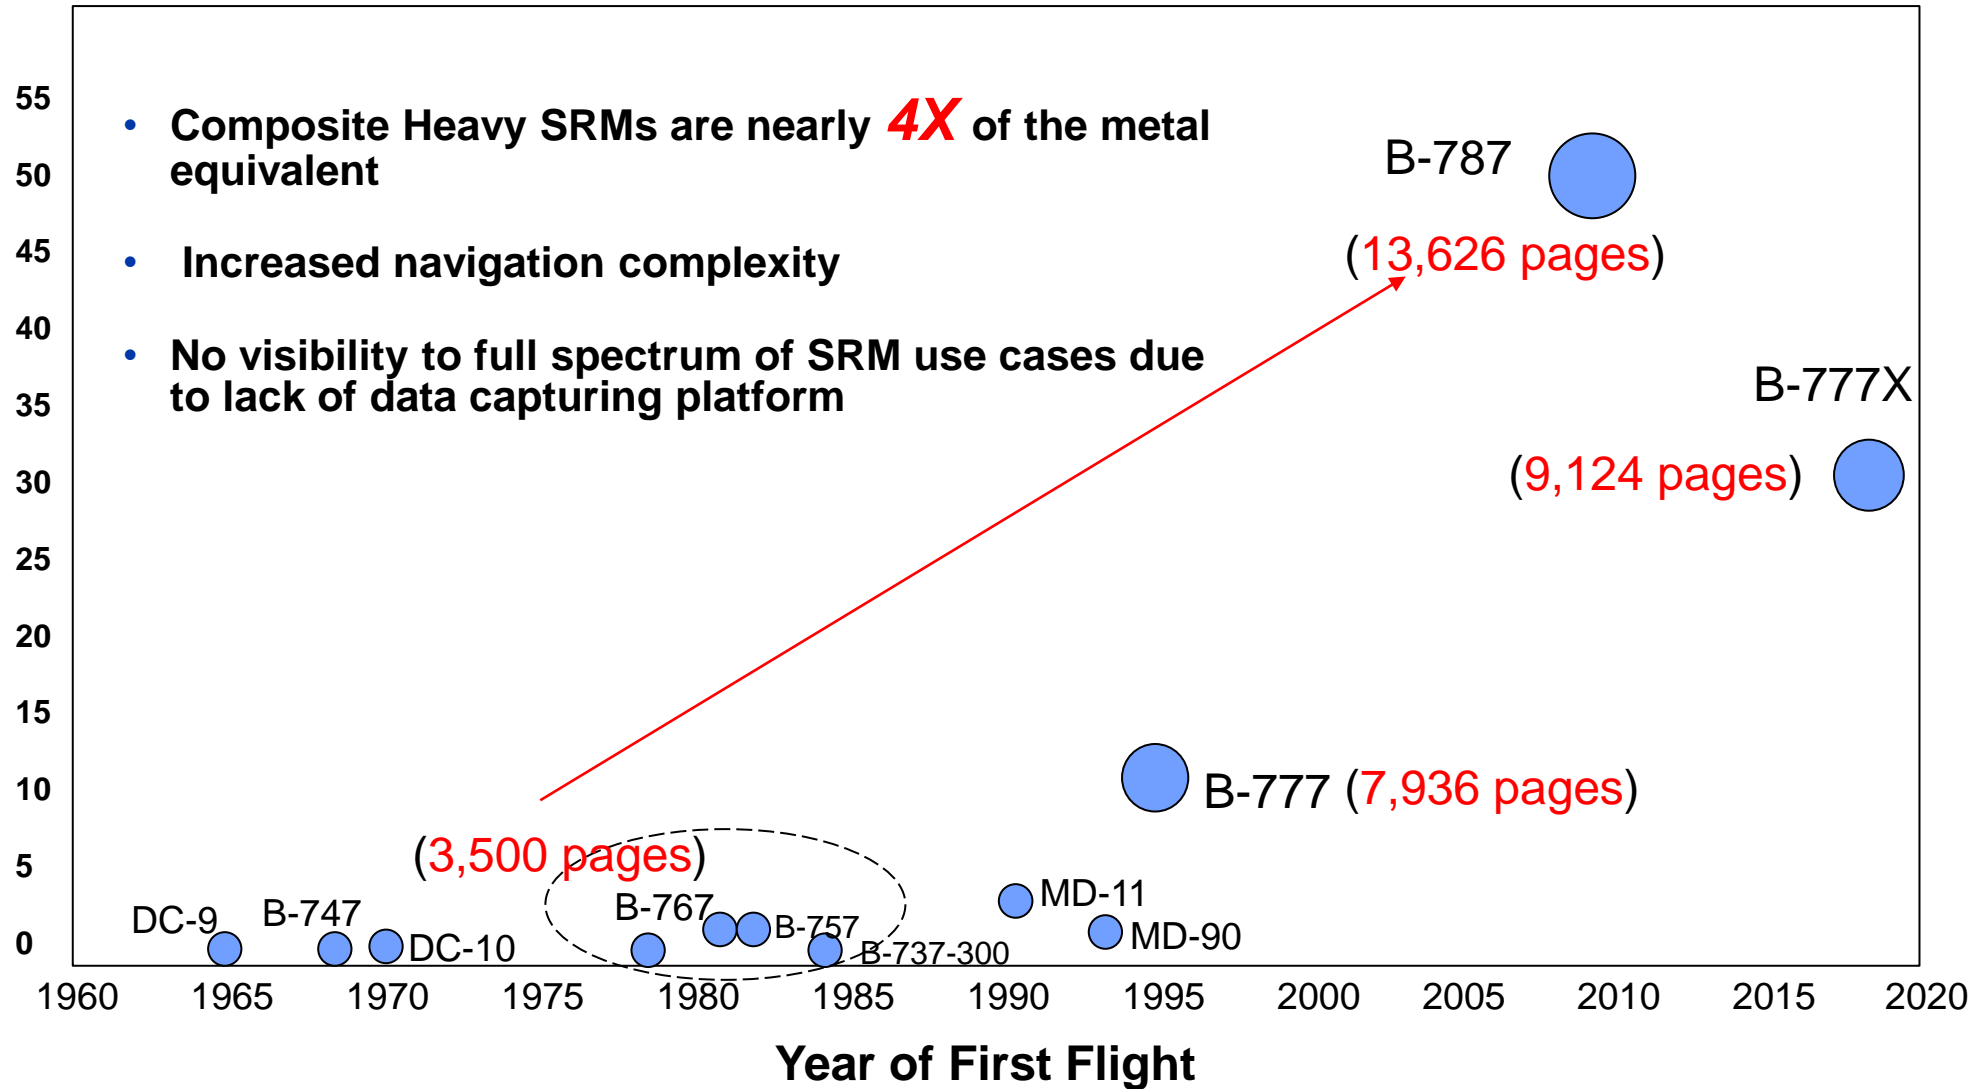

- **eTech 3DRepair**

A mixed fleet integrated solution for recording, assessing, monitoring and reporting aircraft structural damage via a tablet based portable tool (Airbus Services, Feb 2021)

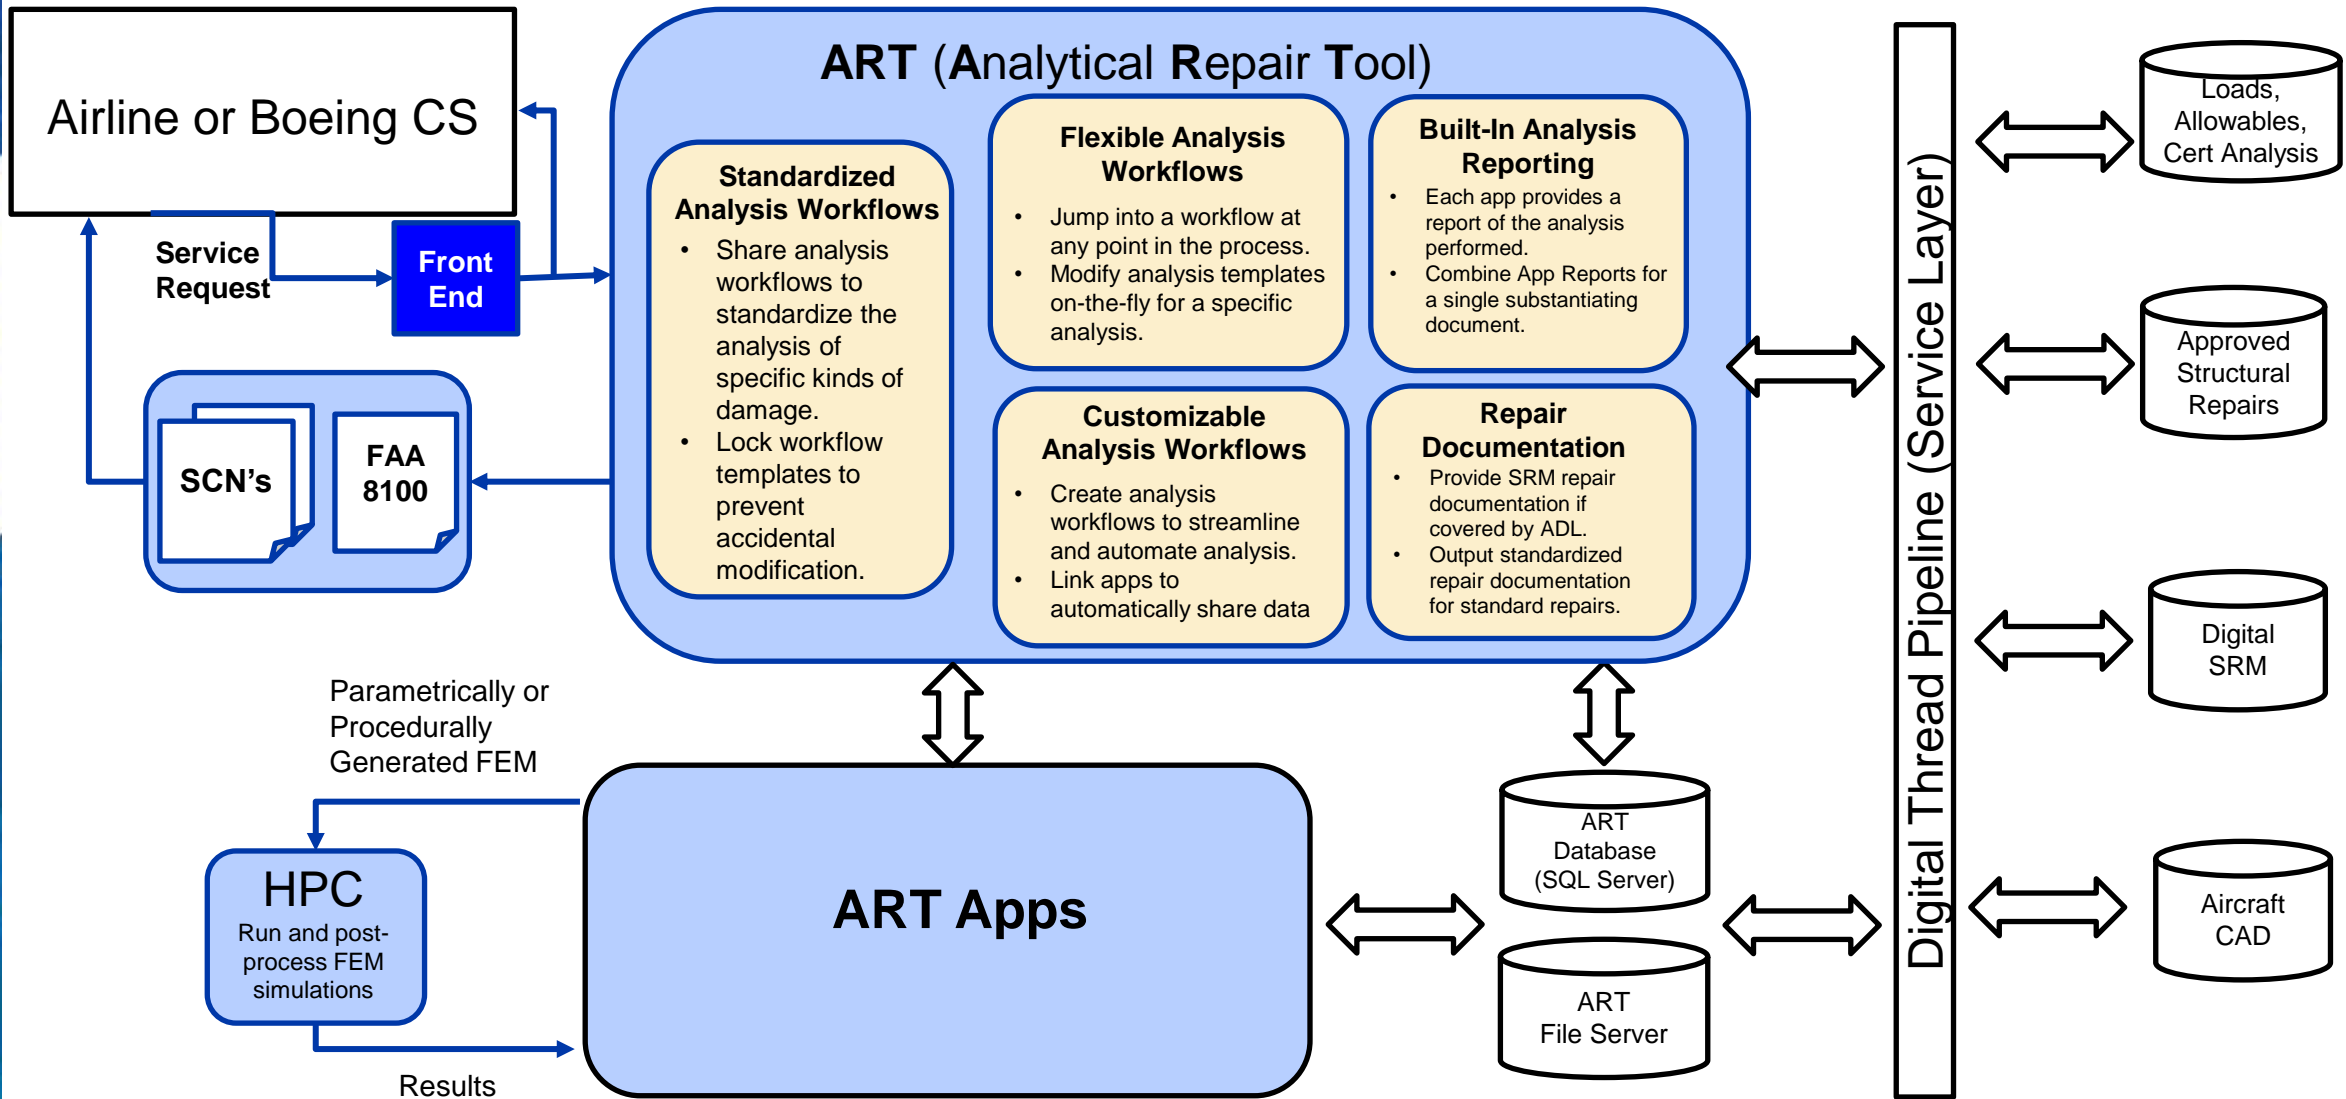

Structural Repair Manual (SRM) Needs a Digital Make-over

Percentage of Composites by Weight

Smart SRM with location-based automated ADL/RDL represents a huge opportunity

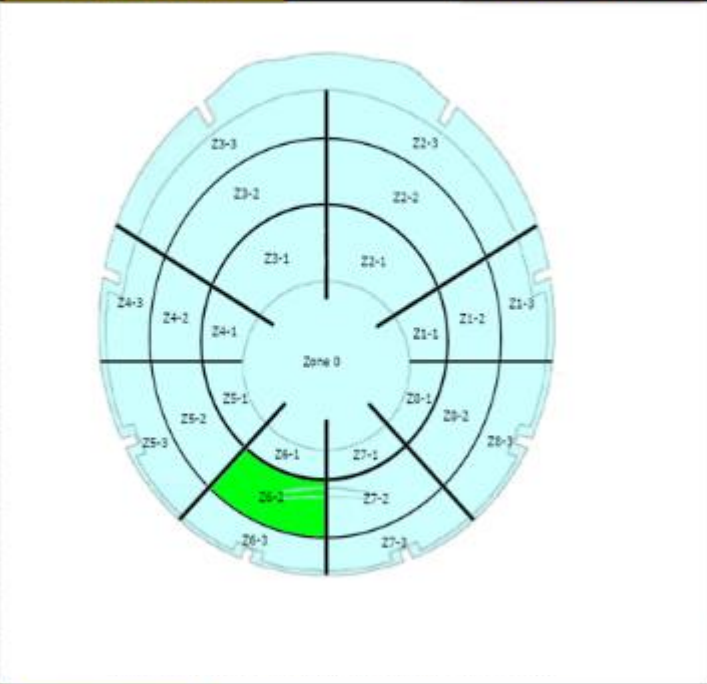

Digital Thread – Analysis Centric View

Automated Radome Dent Analysis

Integrated Digital Environment (IDE)

- 3DEXPERIENCE Example

Scarf Joint Method (SJM)

- Category: Closed-Form
- Application: Bondline analysis (strength and damage tolerance) of a **scarf** or **multiple step joint/repair**
- New capabilities:
 - Peel and shear **Coupling** (beyond A4EI capabilities)
 - **Disbond/delamination** (beyond VCTeM capabilities)
 - Non-matching patch/parent material or thickness

$$t_s(x_k) = t_1 + t_2 + x_k \cdot \text{ratio} \cdot l_k$$

$$t_p(x_k) = t_{\text{full-patch}} - t_s(x_k)$$

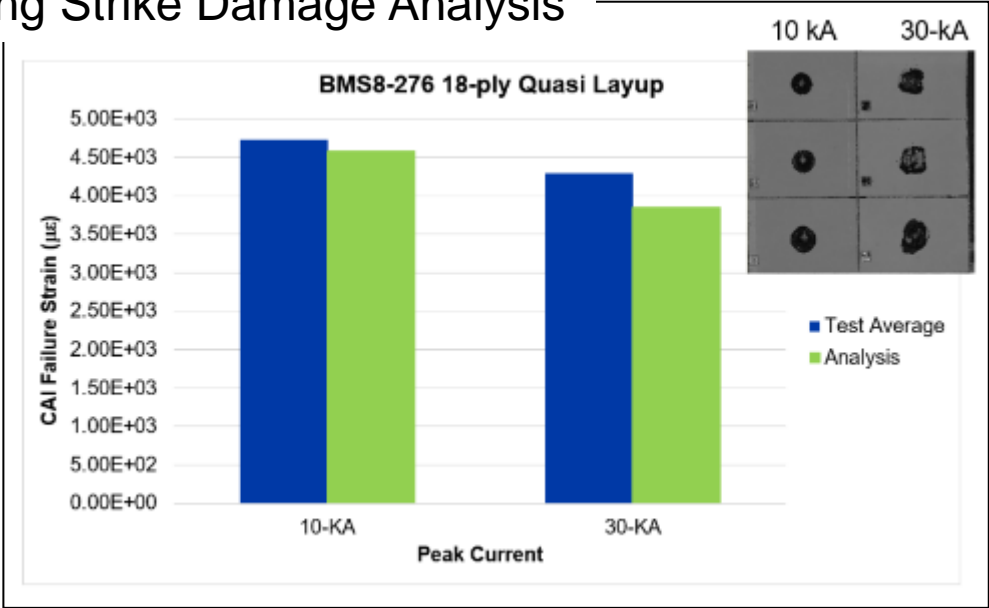

$$G_{II} = \frac{1}{2} \cdot \frac{F_x \cdot \Delta U_x}{\Delta a}$$

$$G_I = \frac{1}{2} \cdot \frac{F_y \cdot \Delta U_y}{\Delta a}$$

Progressive Failure Analysis for Smarter Testing

Fully Parameterized Bolted Joint Model – Vari-Fast3D

- BR&T developed ABAQUS plug-in for parametric bolted joint detail modeling

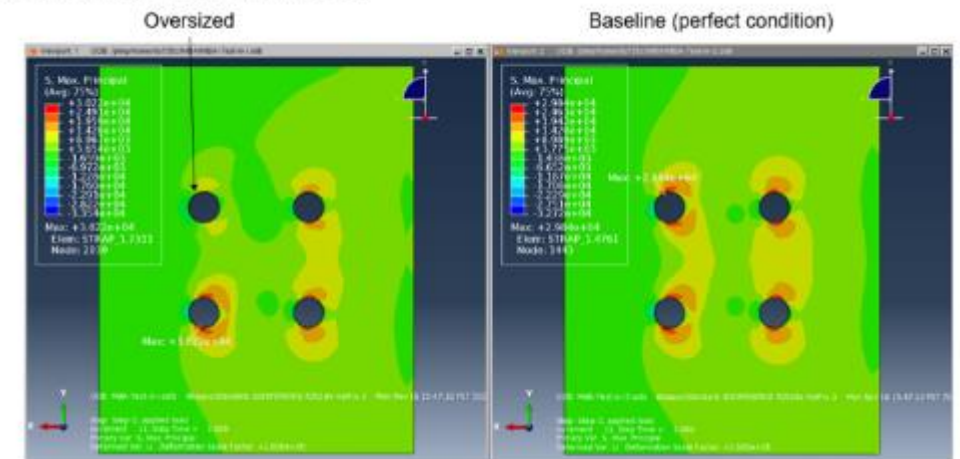

- A. Joint Configuration (SS, DS, Tapered Joint, generic bearing bypass)
- B. Joint Component Definition (two straps + shim)
- C. Fastener Library/Custom (Protruding Head, Counter-sink)
- D. Fastener Pattern (up to 4 x 4 array)
- E. Oversizing (Pre-load included, specifiable hole/fastener)

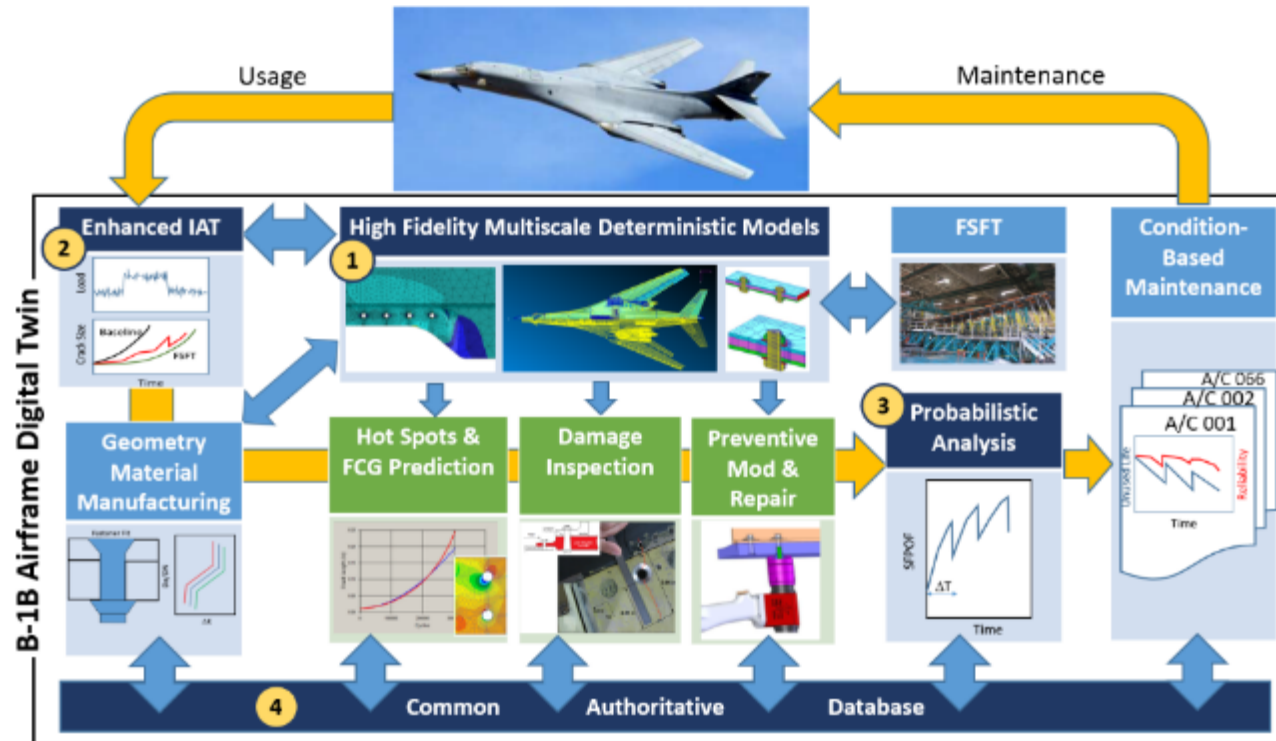

Generic Bearing Bypass Model

One fastener hole oversized by 0.01"

AFRL

AFRL's Airframe Digital Twin

Goal: Provide Information about Operational and Economic Risks

Decision: When to require critical structural inspections?

<u>Req'd Outcome 1:</u>	Successful/Safe Missions
<u>Req'd Outcome 2:</u>	Required Service Life Achieved
<u>Desired Outcome 1:</u>	Sufficient Maintenance Lead Time
<u>Desired Outcome 2:</u>	Minimum Maintenance Downtime
<u>Desired Outcome 3:</u>	Minimum Maintenance Cost

Summary

- **Develop Digital Thread / Digital Twin for structural repair by**
 - Fully digitizing Structural Repair Manuals (SRMs)
 - Developing connected databases from front-end to final regulatory approval
 - Providing automated Allowable Damage Limits (ADL) and Repairable Damage Limits (RDL) disposition
 - Integrating rapid analysis toolset for non-SRM damage disposition and repair design analysis
 - Providing data analytics that feeds Maintenance, Structural Design and Design for Reparability
